PROFILE SUMMARY

Undergraduate student undertaking a BSc (Hons) in Business Information Systems at the Informatics Institute of Technology, Sri Lanka (affiliated to the University of Westminster, UK). Experienced in SQL database structure and query optimization, Python based programming with Anaconda to analyze data and PHP-based programming with SQL to integrate in webbased applications. Good analytical thinker who loves to solve business problems using information systems. Familiar with working on academic projects and would like to use technical and problem-solving skills in a professional internship environment.

EDUCATION

Informatics Institute of Tecnology, SriLanka(University of Westminster, UK)

BSc (Hons) in Business Information Systems- BIS

Jan 2025- 2028

Hindu College Colombo - 04

Jan 2008- 2022

- G.C.E Ordinary Level Examination - Results: 6C, 3S
- G.C.E Advanced Level Examination—Commerce Stream
- English Course - 02-month Short English Course at British council (CMB Upper Secondary 1) (Jan 2019)

TECHNICAL & BUSINESS SKILLS

- **Business Analysis:** Requirement gathering, workflow optimization, and business process modeling.
- **Data & Databases:** Conceptual EERD modeling, SQL, and database management (PHP/MySQL).
- **Project Management:** Strategic planning, cross-functional coordination, and documentation.
- **Software Principles:** Familiarity with Object-Oriented Programming (OOP) and foundational UI/UX principles to ensure system usability.
- **Tools:** MS Office Suite (Excel/Word/PowerPoint), Draw.io, Visual Studio Code.

PROJECTS

JungleTrailTours case study Project - Level 4

Designed and implemented a relational database for a wildlife tour company case study, including UML ERD modeling, schema mapping, and SQL development. Built normalized tables with PK/FK constraints, inserted test data, and executed queries to demonstrate functionality, supported by documentation and a video walkthrough.

Database Systems Coursework- level 5

Part A: Designed a conceptual database schema for Foodz@Yourz, producing UML-based EERD, data dictionaries, and a decision log aligned with business rules.
Part B: Mapped the conceptual model into a logical relational schema, documenting mapping decisions and ensuring normalisation, relational integrity, and robust implementation.

HomeFix Hub Platform BIS Development Coursework – Level 5

Designed and implemented an object-oriented web application prototype using OO PHP and MySQL to manage maintenance service profiles and professional records. Developed a normalized relational database schema to cleanly store multi-attribute technician data, regional coverage sectors, and service descriptions. Engineered a centralized custom database class to optimize connection handling, isolate backend logic, and execute secure CRUD operations (Create, Read, Update, Delete). Conducted comprehensive black-box testing workflows, logging explicit program actions against system behaviors to verify deployment integrity.
