## PROFILE SUMMARY

Analytical and detail-oriented Business Information Systems undergraduate student at the Informatics Institute of Technology (affiliated with the University of Westminster, UK), aspiring to pursue a **Business Analyst** internship. Experienced in translating complex business problems into clear technical solutions, managing system specifications, and building high-fidelity functional prototypes. Proficient in data modeling, SQL query optimization, and process mapping. A collaborative thinker who excels at bridging communication gaps between business stakeholders and software development teams.

## EDUCATION

### Informatics Institute of Tecnology, SriLanka(University of Westminster, UK)

BSc (Hons) in Business Information Systems- BIS

Reading

### Hindu College Colombo - 04

Jan 2008- 2022

- G.C.E Ordinary Level Examination - Results: 6C, 3S
- G.C.E Advanced Level Examination—Commerce Stream
- English Course - 02-month Short English Course at British council (CMB Upper Secondary 1) (Jan 2019)

## TECHNICAL & BUSINESS SKILLS

- **Business Analysis & Requirements:** Requirement Gathering, Business Process Modeling, Workflow Optimization, Use Case Specification, and System Architecture Design.
- **Data, Modeling & Analysis:** Time Series Forecasting, Simulation Modeling, Conceptual EERD Modeling, SQL Database Structure, and Data Dictionaries.
- **Software Principles & Frameworks:** Object-Oriented Programming (OOP) Concepts, Agile/Scrum Frameworks, User Story Mapping, RACI Matrices, and Foundational UI/UX Usability Principles.
- **Tools & Frameworks:** XAMPP (Local Deployment Server), Draw.io, Visual Studio Code, MS Office Suite (Excel/Word/PowerPoint).

## PROJECTS

---

### Agile Project Management and Professional Experience—Coastal Tours Project

Collaborated within a five-member Agile team to design a high-fidelity web application prototype aimed at modernizing legacy systems into a scalable SaaS platform for B2B and B2C bookings. Championed core project coordination activities by defining the project's Minimum Viable Product (MVP) through structured User Story Mapping to translate business requirements into clear system specifications. Established a project RACI register to cleanly assign roles, allocate tasks, and streamline communication loops while co-developing the interactive application prototype with a primary focus on user navigation and system usability.

### Forecasting and Simulation Modeling Project

Applied time series forecasting and simulation modeling using advanced Excel capabilities to analyze complex NHS prescribing data and optimize production decisions for a sportswear company. Translated data analysis trends into operational requirements, producing a comprehensive professional report, supporting functional data models, and a video walkthrough demonstrating methodology and strategic results.

### BIS Design & Architecture - Foodiverse Project

Coordinated with a student group to design a comprehensive system architecture for a global recipe-sharing platform using class and state diagrams. Effectively managed the delivery of end-to-end system documentation and proposed user-centric GUI enhancements based on close group collaboration and established software design patterns to ensure maximum system usability.

### Global Business Challenges Report

Evaluated global business challenges and the strategic role of Information Systems (IS) across HR, e-commerce, supply chain management, and daily workflows. Delivered detailed strategic insights and digital transformation recommendations through comprehensive case studies on market leaders including Walmart, Amazon, Toyota, and Uber.
